

TRINETRA CRIME INTELLIGENCE SYSTEM

Concise Operational Guide: Features, Functions & Step-by-Step Usage

Version 2.4 | Delhi-NCR Investigation Special Cell

SYSTEM PURPOSE

Trinetra is an intelligence-led investigation platform designed for law enforcement officers to connect scattered FIR records, automatically extract crime entities (suspects, vehicles, burner phones, bank accounts), and uncover inter-state criminal syndicate networks.

1. Overview (Command Dashboard)

Command & Monitoring

Primary Function: Provides real-time situational awareness of active FIRs, indexed suspect counts, discovered cross-case links, and emerging syndicate threats across jurisdictions.

How to Use:

- KPI Metrics: Check real-time counts for Cases, Suspects, Entities, Connections, and Active FIRs.
- Syndicate Alert Banner: Highlights fast-growing criminal clusters (e.g. Vehicle Theft Ring). Click "Inspect Syndicate" to load the network graph.
- Cross-Case Leads: Review high-confidence connection leads showing match scores (e.g. 95%) and shared entities. Click any card to inspect the connection.
- Recent FIRs: Browse latest registered criminal incidents and their direct link counts.

2. Case Repository & Dossier Workspace

FIR Management

Primary Function: Centralized repository of all first information reports (FIRs) with multidimensional search and structured case dossiers.

How to Use:

- Search & Filter: Search by FIR number, suspect name, phone, or vehicle plate. Filter by crime type or city.
- Case Dossier: Click on any case card to open the complete Case Dossier Modal.
- Dossier Details: View incident narrative, extracted entities (phones, vehicles, UPI handles), assigned officer, priority level, and timeline logs.
- Register New FIR: Click "+ New FIR" in the top bar to record a new case manually or auto-extract from document text.

3. Syndicate Graph (Case-Centric Network Intelligence)

Interactive Visual Graph

Primary Function: Interactive force-directed graph centered strictly around a single selected root case, mapping its direct entities and high-confidence similar cases ($\geq 90\%$ cutoff).

How to Use:

- Left Panel Case Selector: Search and pick any case (e.g. FIR-101) to make it the central root node.
- Graph Canvas: The selected case appears in high-contrast red/rose. Direct entities (suspects, phones, cars) orbit around it.
- Similar Cases ($\geq 90\%$): High-similarity cases appear linked with matching percentages. Click "Focus As Root Node" on any linked case to pivot the analysis.
- Canvas Controls: Pan, zoom (scroll or +/- buttons), drag nodes, toggle physics simulation, or export the graph as PNG.

4. Connections (Cross-Case Link Discovery)

Link Analysis

Primary Function: Identifies hidden connections between separate FIRs using shared phone numbers, vehicle registrations, financial identifiers, and suspect co-occurrences.

How to Use:

- Corroboration Matrix: Browse ranked leads ordered by match score (e.g., 95% Link).
- Inspect Evidentiary Reasons: View corroborated evidence points (e.g., "Identical burner phone active in both crime scenes").
- Path Finder: Select any two entities/suspects in the dropdowns to compute the shortest multi-hop connection chain linking them.

5. Timeline Evolution

Chronological Tracking

Primary Function: Chronological reconstruction of criminal activity, showing how syndicates operate and escalate across time.

How to Use:

- Time Filtering: Select presets (30 Days, 90 Days, 6 Months) or pick custom date ranges.
- Activity Heatmap: Identify peak crime days and coordinated syndicate timing.
- Incident Flow: Follow sequential incidents to establish patterns of behavior for court evidence.

6. Geo Intelligence (Geospatial Mapping)

Spatial Crime Analysis

Primary Function: Interactive map pinpointing crime locations, suspect movement corridors, and interstate escape routes.

How to Use:

- Explore Map: Pan and zoom across Delhi-NCR and adjacent states.
- Map Pins: Click any case pin to preview FIR summary, crime category, and location coordinates.
- Corridor Lines: View dashed route corridors showing getaway paths between incident spots.

7. Document Ingestion & AI Entity Extraction

Automated Processing

Primary Function: Converts unstructured text documents (FIR scans, witness statements, CDR logs) into structured database entities.

How to Use:

- Upload / Paste: Paste raw complaint text or upload a document file.
- Run Extraction: Click "Analyze & Extract Entities" to run the automated AI entity extraction engine.
- Review Extracted Data: Inspect extracted names, phone numbers, vehicle numbers, and monetary handles with one-click case creation.

8. AI Copilot (Investigation Assistant)

Gemini AI Assistant

Primary Function: Natural language investigative assistant capable of querying the entire criminal database and synthesizing evidence.

How to Use:

- Ask Questions: Type investigative questions like "Which suspects are linked to vehicle DL01AB1234?" or "Summarize the interstate luxury car syndicate".
- Suggested Prompts: Click pre-formulated prompts for immediate cross-case pattern analysis.
- Cited Sources: Copilot provides direct citations to relevant FIR numbers and suspect records.

9. Formal Reports (Legal Dossiers)

Court Evidence

Primary Function: Generates structured, print-ready investigative reports for court submission, case handovers, and supervisory review.

How to Use:

- Select Case: Choose target FIR or syndicate cluster.
- Choose Format: Select Charge Sheet Summary, Inter-State Brief, or Entity Profile.
- Export: Click "Print / Save PDF" to generate clean, evidentiary documents with officer sign-off sections.

10. Officer Profile Switcher

Identity Management

Primary Function: Switch between registered investigating officer identities without logging out, adapting permissions and assigned case views.

How to Use:

- Profile Icon: In the top-right navigation bar, click the circular officer avatar icon.
- Officer Menu: An inspector selection popover will appear showing active officers (Inspector Kabir Rathore, ACP Sunita Verma, Sub-Inspector Rohit Malik).
- Switch Profile: Click any officer to immediately switch your active session profile.

QUICK SHORTCUTS & BEST PRACTICES

1. Pivot Investigations: On the Syndicate Graph, always click "Focus As Root Node" on similar cases to trace criminal branches.
2. Path Finder: When investigating two seemingly unrelated suspects, run the Path Finder in Connections to expose the middleman.
